City Planning Expert Hired By Trustees

G. Gordon Whitnall, secretary of the Los Angeles City Planning Commission, will be employed by the city trustees to help formulate a city zoning program along modern lines and suited to the peculiar needs of Sierra Madre. A resolution to that effect, offered by Trustee Topping, was adopted unanimously at last night's meeting of the trustees. Mr. Whitnall will receive a lump sum of \$150 for his services.

Mr. Whitnall is recognized as the leading authority in California on the subject of modern city planning. He will make personal inspection of the city and after submitting his suggestions will be available for further consultation. The question of zoning the city was brought up some weeks ago by the request from a number of citizens that a psychopathic institution be excluded from their neighborhood. City Attorney Baker ruled that such action would be illegal unless the city had a general zoning ordinance, providing restricted districts for various classes of business.

New Municipal Nurse

Mrs. Leila Montee Roberts was appointed municipal nurse to succeed Miss Sadie Marcy who resigned to accept a position with the county health department. Mrs. Roberts' application for the position was accompanied by splendid endorsements and credentials from the hospital of the University of Kansas, where she received her training and diploma as a graduate nurse and where she had considerable supervisory experience. The appointment of Mrs. Roberts was recommended by Dr. E. L. Jackson, city health officer.

City Inspector

The resignation of George H. Cox as electrical and plumbing inspector was read and accepted. Mr. Cox also asked thirty days leave of absence from the position of night watchman, which was granted on account of his ill health. City Marshal A. M. Udell was appointed inspector of wiring and plumbing at a salary of \$35 monthly in addition to his other compensation.

AGRICULTURAL EX-TENSION SERVICE IN CONFERENCE

The farm advisors and assistant farm advisors of Southern California met in conference on Thursday, September 14, to go over the work of the past year, to lay out work for the coming year and to coordinate and unify the various projects being undertaken in the different counties. Representatives of the state leader's office at Berkeley, and specialists were also in attendance.

Federal Farm Loans at Low Interest

Through increased efficiency in handling farm loans, long-time loans with a total yearly payment of 6 per cent are now available according to E. S. Gardner, secretary of the Los Angeles national farm loan association. These loans may run for a term of thirty-three years, the 6 per cent including both interest and payment on the amortize plan. Loans may be obtained up to 50 per cent of the appraised value of the land and 20 per cent of the permanent insurable improvements and are made on ranch or farm land of not less than ten acres. Loans may be obtained by making application to the office of the First National Farm Loan Association, 446 Bradbury Building, Los Angeles.

Preliminary Survey on Alfalfa Plots

Preliminary results of this season's test plots on alfalfa indicate that on a sandy loam soil this year, the use of sulphur increased the yield 49 per cent; lime and sulphur, 28 per cent; gypsum, 14 per cent and lime 20 per cent. The final results at the end of the season are being looked forward to with interest because of the relative merits claimed for these different materials.

Miss Lucille Sparks will resume her duties Monday as teacher in the Glendale schools after spending the summer in Sierra Madre.

Miss Lorraine Wright has gone to Ontario to take a position as kindergarten teacher in the city schools.

Mr. and Mrs. C. F. Stanley and Miss Alice Stanley drove to San Diego Tuesday for a visit of several days.

Schools Show Fine Increase In Enrollment

With the attendance of more than 400, the Sierra Madre school opened Monday morning.

Pupils were somewhat crowded owing to the unfinished condition of the new additions to the main building. But the plastering has been completed and the finish work will be given their permanent arrangement as soon as possible.

Superintendent E. H. Reynolds says the registration is somewhat in excess of that of last year at the opening date. It is expected there will be a considerable increase during the next two months. This is invariably the case with the return of many families from belated vacations and the influx of winter residents.

Pupil's Lunches

Milk will be provided the children at cost for their recess lunches, under an arrangement made by the teachers and placed under supervision of Miss Elizabeth Steinberger of the first grade. Five-cent bottles will be provided and twenty-two tickets will be sold for a dollar.

Cafeteria Plans

Plans for the school cafeteria which will provide hot noon lunches for pupils, will be taken up at a meeting to be held in the kindergarten building Wednesday evening. Dr. Elizabeth M. Saphro, deputy county health officer, will be present to assist in the planning. While the cafeteria will be sponsored by the Parent-Teacher's Association, a cordial invitation is extended to all parents to be present at the meeting Wednesday evening.

Public Reception

As soon as the new additions to the school plant are ready for use, it is the plan of the school trustees and faculty to hold a public reception and house-warming. It is believed the enlarged buildings will be something for the community to be proud of, and the school authorities wish the public to become familiar with what has been done.

RADIO SERVICE

SENT BY MAIL

University Extension Division Offers
Interesting Aid to Radio
Enthusiasts

Radio enthusiasts will be interested in the announcement that the University of California Extension Division has a new course to be sent out from the university by mail. This course has been specially written for the average man who has, or is considering the installation of a radio set in his home. It will also be of value to electrical contractor-dealers or to salesmen who handle radio apparatus. The text for the course will be published in the magazine, Radio, commencing with the October 1922 issue and running for seven months. Through arrangement with the Extension division, a special subscription price has been set to cover the issues in which the radio course will appear. With each lesson, the Extension division will supply a considerable amount of information regarding radio telephony in addition to questions, which will be corrected by a radio expert and returned with criticisms and suggestions.

Among some of the subjects to be included in this course are such questions as the electron theory, tuning, detectors, vacuum tubes, the Armstrong principle of regeneration, radiophone broadcasting, and practical hints for radiophone reception. No previous knowledge of electricity is necessary and the course forms a basis for a more advanced study of radio engineering. The university has prepared to handle a large enrollment in this course through its Extension division office, 301 California Hall, Berkeley, California.

Mrs. W. V. Bowmer of South Baldwin avenue, passed away on Wednesday at the home of her mother, Mrs. Carr of Los Angeles, after an illness of several months. Funeral services were held in Los Angeles today. In addition to her husband, Mrs. Bowmer leaves three small children, William, Eugene and Thomas, also a son by a former marriage, Jackson Fitzgerald-Randolph. Mr. Bowmer has the deep sympathy of a large number of friends who held Mrs. Bowmer in high esteem.

FIRST SIGN OF WINTER

PICTURE STORY OF ELECTRICITY COMING

Novel Entertainment to be Given Before Community Club Next Thursday

Whence the juice comes that lights our houses, runs our washing machines and sweepers, turns the big motors for our business and runs our electric trains will be graphically shown on the screen next Thursday evening at the Congregational church. The occasion will be the first fall meeting of the Men's Community Club.

Dinner will be served promptly at 6:30 by the ladies of the Aid Society, whose dinners have the reputation of being big value for 50 cents. All men of the community, whether members of the club or not, are invited to the dinner.

Following the dinner in the church parlors, the screen entertainment and lecture will be given in the church auditorium, beginning at 7:30. Ladies and children are invited to this interesting entertainment, one feature of which will be especially interesting to the housewife.

The lecturer of the evening will be Mr. Walter G. Blossom of the Southern California Edison company. His subject will be "The Romance of Electricity," and he deals with the wonders of modern electrical power development. It is also somewhat historical in character. Both motion pictures and stereopticon views will be shown. Mr. Blossom will be assisted by Mr. Richard E. Smith. The entertainment has been secured through the courtesy of Mr. Fred Schwartz, district agent for the Edison company. It has been given before clubs and chambers of commerce in nearly every town of the San Gabriel valley, and invariably received with approval.

PROUDFIT-TALLY

Seymour Tally, son of T. L. Tally, pioneer Los Angeles theater man, was married at noon Thursday to Miss Delia C. Proudfit of Pasadena at the Church of the Angels. Miss Proudfit, daughter of Mr. and Mrs. L. A. Strohm of Chicago, received degrees from the Universities of California and Wisconsin. The couple will make their home at Glenn Ranch, managed for his father by the bridegroom. Later they expect to make a honeymoon pilgrimage to New York. Miss Proudfit resided in Sierra Madre several months, and has many friends here who were interested to know of her marriage.

Mr. and Mrs. C. F. Stanley and Miss Alice Stanley drove to San Diego Tuesday for a visit of several days.

SURPRISE SHOWER FOR BRIDE-ELECT

Miss Elizabeth Morosco, daughter of Mr. and Mrs. S. Morosco of 607 E. Grand View, whose marriage to Louis Scottini of Los Angeles, will take place at St. Peter's Church, Los Angeles, Saturday, September 16 at 10 o'clock a. m., was the honor guest at a beautifully appointed miscellaneous shower at the home of her sister, Mrs. J. Lorenzini, of East Grand View on Thursday evening. The affair which was a complete surprise to the bride-elect, was arranged and attended by about twenty of Miss Morosco's friends.

Little Dorothy Lorenzini, the niece of the bride-elect, impersonating cupid and carrying a bridal bouquet of pink and white blossoms, brought the shower gifts into the room in a gaily decorated wagon. The same pink and white color scheme was carried out in the decoration of the rooms by Mrs. Lorenzini. The evening was spent in playing games and in listening to a delightful entertainment program. Mrs. Cornelia Silva assisted the hostess in serving refreshments. Those present were, Mr. and Mrs. S. J. Morosco, Mrs. W. Corum, Alice Corum, Mr. and Mrs. Kramer, Mr. F. Salvitti, Mrs. Paul Boehmefre of Los Angeles, Mrs. Mary Watry of Alhambra, Mrs. P. Piscce of San Pedro, Mr. and Mrs. C. C. Silva of San Luis Obispo, Miss H. Long of Los Angeles, Mrs. J. Cerdano of Los Angeles, Miss M. Morosco of Santa Monica, Miss M. Storti of Los Angeles, Mr. and Mrs. Valentine of San Luis Obispo, Mr. and Mrs. John Sobieski, of Los Angeles, and Miss Ellen Silva of San Luis Obispo.

Miss Hilda Caley entertained on Wednesday night in honor of Mrs. Earl Wathen, formerly Miss Ethel Powell. The affair took the form of a miscellaneous shower, the house being decorated in pink, and the gifts displayed under a pink parasol. The guests included members of the Eleven-and-one Club and a number of other friends. Out of town guests included Mrs. Robert Clark of El Segundo, Mrs. Hanson and Mrs. Monroe of Pasadena, Mrs. Helen Milligan of Riverside, Mrs. Frey and Miss Muriel King of Los Angeles, and Mrs. Etta Dickson Leguin of Alhambra.

Mrs. E. C. Foster of South Baldwin avenue, entertained the ladies of the Get Together Club, a social organization of the ladies of the Eastern Star at her home Wednesday afternoon.

Miss Alice Tufts went to San Diego Saturday for a few days' visit with relatives.

CROWD AT SING IS ENTHUSIASTIC

Weekly Community Sings Begin
Year's Work Under Favorable Auspices

"You haven't forgotten a thing," said Director Hugo Kirchhofer last Saturday night as he put the members of the Community Sing through their paces on selections they had studied last spring.

The club house was well filled, mostly with new members, but with a fair showing of new faces. Mr. Kirchhofer expressed himself as delighted with the attendance and the response to his leadership. He promised some serious choral work this year which will make the work of the Sing more than ever worth while.

"We need about twenty tenors and thirty basses," Mr. Kirchhofer said, "and then we will have a well balanced chorus equal to attempting big musical works. People will come a long way to hear us when we get well under way."

Mrs. Steinberger told the audience of the effort to assure financial support through the sale of season tickets. It is hoped a large number will assist in this way so there will be no uncertainty over the financial outcome of the year. It was voted to elect the officers previously announced as a temporary organization.

MRS. FLAGG TALKS AT LUNCHEON MEETING

Mrs. J. W. Jameson and Mrs. W. J. Lawless entertained with a luncheon at the Lawless home on Wednesday, Mrs. Mollie Bloom Flagg, noted club woman, and Mayor Robert Mitchell being guests of honor.

Mrs. Flagg who is addressing large audiences who are interested in the California Water and Power Act, told the women invited to meet her that the movement supporting the slogan, "Save the Waters of California for the Children of California," is developing the spirit of a crusade. Seventeen of the women present pledged assistance to the work, and with others, expressed the wish that more opportunity to study the question might be provided.

Arrangements have been made by Mrs. Milton Steinberger, Mrs. Snell, and Mrs. Nourse to have a luncheon at the Venture Inn on Wednesday next, September 20, at which Mrs. Flagg will again explain this subject, and answer questions. Everyone interested is invited, and several men prominent in the municipal life of Sierra Madre will assist. Luncheon at 12 o'clock sharp, fifty cents.

W. P. Caley is enjoying an auto trip through the big tree country about Santa Cruz with a party of Pasadena friends.

ONTARIO POWER SYSTEM PROSPERS

The most frequent example cited by both sides in the controversy over the proposed state water and power act, is the province of Ontario. Through numerous friends and relatives, A. F. Snell of Sierra Madre is in close touch with business conditions in that province, and he declares they are united in enthusiastic support of the provincial system. He sends in the following article on the subject:

Ontario in the 1921 report of the hydro-electric commission furnishes the complete refutation of the assertions of the long-range critics that public ownership in that province has proved a failure. This report shows that the commission which has charge of the provincial system in twelve years has grown so rapidly that it is now providing power to 233 municipalities, 47 townships and rural districts distributed over an area 250 miles by 400. The commission is operating 3000 miles of transmission line.

In his report Sir Adam Beck, chairman of the commission, says that in spite of unfavorable commercial conditions throughout the year, "this year's operation is the most successful in the history" of the commission.

In spite of the unfavorable conditions, the report shows that the rates of power to the ultimate consumer have again been reduced. In 1921 the so-called average rate charged to the domestic consumers was less than 2½ cents per kilowatt hour. California consumers continue to pay an average of about 8 cents under private ownership.

The commission served but ten municipalities in 1910, with 750 horsepower, none of which is generated in 1921 it was serving 280 communities and the total load of 375,000 horsepower, none of which it generated. In plants under the control of the commission. Developments which will bring the commission's plants to a total load of 2,000,000 horsepower are already planned with assurance, because of the splendid credit of the commission that they can be readily financed. Far from being a burden, the public ownership plants have proved most profitable financially. In many municipalities the liquid assets alone exceed all liabilities, including the bonds. The net surplus of municipalities for 1921, even at the low rates charged, was \$619,000. Sir Adam Beck said recently in a speech that Ontario now has invested in the provincial hydro-electric system \$230,000,000, which will be increased to \$330,000,000, and declared that not for a moment did the province have to carry the burden of interest or maintenance. The power system pays it all through revenues from consumers and the consumers get the lowest rates on earth.

COLONIAL PROGRAMS OFFER FINE VARIETY

Another solid week of good programs is offered by the Colonial Theater at Monrovia. The first feature is "The Real Adventure," with Florence Vidor, a comedy drama of marriage going through the stages of Ideal, Ordeal and Miss-ideal. James Oliver Curwood's stories have a special charm of their own and "The Valley of Silent Men" with Alma Rubens as the star will be welcomed by a large circle of admirers of these stories of the great Canadian north. "Fools First," is a typical Marshall Neilan production, full of suspense and thrills, the story of a crook who "came back." It is dramatized from a Hugh McNair Kahler story in the Saturday Evening Post. The last feature of the week is the greatest Tom Mix picture yet made, "For Big Stakes." Every program is varied with comedy, pictorial news, and splendid music on the Colonial organ.

Mrs. W. V. Bowmer of South Baldwin avenue, passed away on Wednesday at the home of her mother, Mrs. Carr of Los Angeles, after an illness of several months. Funeral services were held in Los Angeles today. In addition to her husband, Mrs. Bowmer leaves three small children, William, Eugene and Thomas, also a son by a former marriage, Jackson Fitzgerald-Randolph. Mr. Bowmer has the deep sympathy of a large number of friends who held Mrs. Bowmer in high esteem.

COVER CROP IS

GOOD FOR THE SOIL

Farmer Declares It Pays To Use Green Fertilizer to Enrich Land

(First Prize Letter in Contest Conducted by Orchard and Farm)

The planting of a cover crop is one of the least expensive and easiest ways of keeping up the fertility of the soil. We have used various crops for this purpose, but those giving best results are species of the legumes, such as cow-peas, melilotus, vetch or clover. Rye, oats, barley or even weeds will help some by adding humus to the soil, but the legumes, with their nitrogen-gathering power, are better. The nitrogen-fixing bacteria lives in the root tubercles, and when these plants are plowed under, by their decay, enrich the soil with nitrogen.

If the cover crop is sowed in the fall, it will grow through the California winter, and no real crop-growing time will be lost. It is important, however, that it be plowed under in the spring and not be allowed to use up the precious moisture. A cover crop in an orchard in the summer time would be almost as bad as a crop of weeds, and do more harm than good by taking the moisture from the trees.

Uses Peas in Walnut Grove

One fall we planted Canadian field peas on our ten-acre walnut ranch. This was before the war, when the price of such seed was much lower than during recent years. There resulted a rank growth—a beautiful sight—and the peas were plowed when in blossom. It was hard to tell whether we had any more nuts the following season than we would have had without the cow-peas, but we felt assured that they were of better quality. We had few perforated nuts and culls, when many of our neighbors who had not fertilized, complained of having a high percentage. For many years we have put the stable manure from our four horses on the walnut ranch. One of our neighbors once said, "How is it you seem to have such a high-yielding walnut orchard when you give it as little care and cultivation as anyone in the neighborhood?"

We attributed this to the fertilizer each year—the fallen leaves turned under, the application of an available stable manure and an occasional cover crop.

In the fall of 1920 we sowed Melilotus Indica on the five-acre field which we had bought. Knowing it had been farmed by tenant farmers for years, we felt it needed a good coat of fertilizer. The Melilotus made a vigorous growth and was plowed under when it commenced to bloom. In the spring of 1921, prices being so uncertain and farm work crowding, we decided simply to plant this five acres to pumpkins. This would require little expense for seed or cultivation. Such a crop of pumpkins! They netted us \$50 per acre without any irrigation—were hoed only once and weed-knifed a time or two. No doubt the Melilotus helped to make them grow so well. And this spring the dark, rich green color of the field corn planted there and now waist high without any irrigation so far, testifies to the plant food still in the soil.

Two years during the war we raised beans on a fifteen-acre field. These of course, were harvested, threshed, and sold. But the straw and stubble and roots were plowed under. Thus we had the satisfaction of feeling that our soil was being built up instead of depleted.

The same is true of an alfalfa field. When it comes time to plow up an old alfalfa field, one has the best kind of a cover crop, with no extra work or expense. This always makes an excellent seed bed for most any kind of a crop. We have several times followed alfalfa with a crop or two of potatoes. And, if properly cared for, the yield on such ground is always good.

Without doubt, it pays to fertilize. It is said that in Europe a peasant's wealth is measured by the size of the manure pile. Most all farmers agree that there is nothing better than barnyard manure. But this is not always available. Commercial fertilizers give quick results, but they are usually high priced. Frequently, therefore, the farmer will find that a green cover crop is the most practical way of restoring and building up the fertility of his soil.—George J. Michener, El Monte, California.

10,000 DOUGHNUTS

THE "doughnut king"—Jacob Sentlinger Jr., of Wheeling, W. Va.—has a bakery that turns out 10,000 doughnuts a day.

How that must amaze grandmothers who remember when the average family rarely tasted a doughnut that wasn't baked in their own kitchen stove.

It is a clear-cut illustration of the modern tendency toward mass production and specialization.

Not many generations ago, nearly every family grew most of its own food, built its own log cabin or frame house put together with wooden pegs instead of nails. The spinning wheel whirred busily before the open fireplace, helping turn out the family clothing. Even medicine was largely a family affair, concocted from wild herbs.

All this is changed. Fuel comes from coal mines hundreds of miles away instead of from a nearby forest. Also come, from far over the horizon, most of the other necessities of life.

The home no longer is a factory.

Its productive activities have been largely transferred to factories and mills. The penalty of all this is a breaking up of the home, a scattering of family members to the points of concentrated production.

Specialization is the key-note of modern times.

In 99 cases out of 100, success comes as the result of specializing on the production of one commodity or distribution in one particular industry.

The quicker children are made to realize the necessity for specializing, and then becoming experts among the specialists, the sooner they will arrive at financial independence. The secret of success in the twentieth century is selecting one goal and working definitely and unfalteringly toward it.

NOTICE

NOTICE INVITING BIDS BY THE CITY OF SIERRA MADRE, CALIFORNIA, FOR FURNISHING RIVETED STEEL PIPE, PIPE FITTINGS AND TRENCHING IN SIERRA MADRE CANYON PARK AND FOR FURNISHING ALL LABOR AND MATERIAL FOR THE SAME.

Public notice is hereby given that sealed bids will be received by the City Clerk of the City of Sierra Madre, California, until 7:30 p. m. Thursday, September 21, 1922, for the following items:

Schedule A—For furnishing F. O. B. Sierra Madre Canyon Park 1300 feet, more or less, dipped six (6) inch riveted steel pipe and fittings.

Schedule B—Gate valves, tees, angles, etc.

Schedule C—2500 feet, more or less, trenching.

Schedule D—Laying 4500 feet, more or less, standard screw, pipe and riveted steel pipe.

All work to be done in accordance to the plans and specifications adopted by the Board of Trustees of said city, which said plans and specifications are hereby referred to and made a part of this notice.

Said bids must be made on forms which will be furnished by the said City Clerk.

A certified or cashier's check on some bank in the County of Los Angeles, payable to the order of the President of the Board of Trustees of the City of Sierra Madre, for a sum equal to five per cent of the amount of the bid must accompany each bid as a guarantee that the bidder will enter into a contract, if awarded to him, in conformity with his bid.

The successful bidder will be required to give bonds in the amount equal to twenty-five per cent of the contract price for the faithful performance of his contract, and in the amount equal to fifty per cent of the contract price as a statutory bond for the payment of labor and materials.

The Board of Trustees reserves the right to reject any and all bids hereunder.

By order of the Board of Trustees of the City of Sierra Madre, California.

L. DIETZ,
City Clerk of the City of Sierra
Madre, California.
August 31, 1922.

JOHNSON WILL ADMITTED TO PROBATE IN LOS ANGELES

The will of the late Arthur Johnson Sr., has been admitted to probate and the Los Angeles Trust and Savings Bank appointed executor.

The will disposes of an estate estimated at \$50,000, all of which is bequeathed to Arthur Johnson, Jr., son of decedent, with the exception of a legacy of \$5,000 to his grandson, Arthur Johnson, III, and an allowance of \$75 per month to his widow during her lifetime.

LODGE PRACTICE MEETING

Members of Sierra Madre Lodge No. 408, F. & A. M., are notified to appear for a practice meeting next Tuesday evening, Sept. 19, by C. W. Jones, master of the lodge.

VOLUME 16, NO. 50. FRIDAY, SEPTEMBER 15, 1922

BY THE WAY

Now that the primary election is over and the most important contests are already settled, public attention will be focused largely on the various measures submitted under initiative or referendum proceedings, for action at the November election.

That the important election contests were settled, there can be no doubt. The election of Johnson as Senator and Richardson as governor are foregone conclusions. Sheriff Traeger, Supervisor Cogswell, and other county officers were elected outright. The Lineberger-Randall Congressional fight holds the usual possibilities for excitement. But in the main, interest of the November election in California will be centered on the numerous propositions on the ballot.

Out of the long list of measures, two stand out as supremely important, and are receiving the most attention. These are the Wright Enforcement Act and the Water and Power Act.

Law and Order

The Wright Enforcement Act was passed by the legislature and is now submitted to the voters under referendum proceedings. It simply does what all but two of the states have done—provides for state enforcement of the federal laws on prohibition. It adopts the federal law specifically as the law of California under that section of the Eighteenth Amendment to the Federal Constitution which provides that it shall be enforced concurrently by the federal and state governments.

The contest over the Wright Act is no longer merely a "wet and dry" fight. It is a fight for law and order. Many people who conscientiously opposed prohibition are now accepting it as the law of the land and are supporting this act rather than submit to the lawless domination of the bootleggers.

In their fight on the Wright Act the bootleggers and organized liquor interests are spending vast sums. Their spokesmen have exactly reversed the position they took two years ago on the Harris Enforcement Act. That act specified the alcoholic content of intoxicating liquor and in some details was more stringent than the Volstead Act. The liquor interests opposed it by saying that the California standard should be the same as the national standard. They said we should wait until 1921 and let the legislature adopt an enforcement act in harmony with the national law, and flexible enough to follow possible future modifications of the national law. The Harris Act was voted down, and the legislature of 1921 adopted the Wright Act in exact accordance with that suggestion. Now those same interests argue against the Wright Act on the ground that enforcement of the Eighteenth Amendment is a national and not a state prerogative. Such inconsistent antics have antagonized many sincere persons who were opposed to prohibition but do believe in truth and justice, and law and order.

Water and Power

A lady who heard a keen argument on the water and power act, went home and asked her husband which side he believed in. He admitted he did not know, having heard good arguments on both sides. She replied that it would take a good deal to convert her over from the side she had heard supported before her club that day. That seems to be a common experience in this contest. Most people are apt to be strong for the side they hear first—until they hear a good speaker on the other side.

In general, the act provides for the state of California undertaking the development of the public resources of water and power. California has the greatest undeveloped wealth in the country of this character. The basic question is, whether these resources shall be developed under private or public ownership.

The act provides for supervision and control of water and power projects by a board of five members appointed by the governor, and subject to removal by the legislature or by recall proceedings. Funds for water and power development would be provided by the issuance of state bonds, for each project as needed. It is expected that the bonds would be retired out of the proceeds of the specific project for which they were issued. The credit of the State of California would be back of these bonds just as the credit of a great utility corporation is back of new securities issued to finance its own new projects. The maximum amount of bonds authorized under the act is \$500,000,000. This amount is in keeping with the available water and power resources and the development programs already mapped out by the power corporations.

There is no question about the resources being there, awaiting development. The question is, shall future development be under public or private ownership, or can the power corporations serve the public better in this business than can a public administrative body? Stripped of endless and involved arguments, that is the heart of the question. Take your choice.

Don't Put It in the Attic

It's Fun to Refinish It Yourself
—We'll Tell You How

MANY lovely home things are put in the attic when they are old only on the outside. They would look as good as new if refinished.

You can refinish them yourself with a little paint, varnish, or enamel, and a bit of work "that is really fun."

We organized a special department just to tell you how to refinish things successfully. Write our "Home Service Department," telling them what you want to refinish and how you want it to look.

Our experts will tell you just how to do the work, what materials, brushes, etc., you need.

We make special paints, varnishes, enamels, wall finishes and stains for you to use. They are the results of 73 years in the paint-making business.

They are the best materials of their kind that we know.

Ask for Fuller's Free Advice and see Fuller's Products to make your home even more attractive than it is now. The work is easy and fascinating.

The results are a wonderful reward.

Decoré Varnish Stains

Decoré Varnish Stains for refinishing furniture and woodwork. They stain and varnish in one operation. Made from the finest of natural wood. Made in 8 colors.

We also make Rubber-Catalyzed Floor Paint, All-Purpose Varnishes, Silkenwhite Enamel, Washable Wall Finish, Fifteen-for-Floors Varnish, Fullers Elixir of Varnish, Floor Wax, Autolee Enamel, Fuller's Hot Water Wall Finish (kalomine), Porch and Step Paint, and PIONEER WHITE LEAD.

Neighborhood NEWS

Mrs. F. H. Hartman, Mrs. Rudolph Hartman and Rudolph Junior have returned from a week's outing spent at Hermosa Beach.

Mrs. George B. Morgridge entertained a dozen friends informally last Friday afternoon. Bridge helped to pass the time pleasantly.

Mrs. G. H. Howard and son, Frank Spencer, left yesterday for San Diego where they will spend three weeks.

Mrs. Joseph Leguin and children of Alhambra are enjoying a visit at the home of her parents, Mr. and Mrs. J. C. Dickson.

Mr. and Mrs. O. A. Peterson of San Bernardino visited Sunday at the home of Mr. and Mrs. George B. Morgridge. On their return home they were accompanied by their daughter, Hortense, who had been visiting here.

Mrs. Louis Karpf and family of 375 East Grand View avenue, have returned from Venice, where they spent eleven weeks.

Miss Esther Olsen is enjoying a fortnight's stay at Big Bear Lake. A pleasant feature of her outing was a horse-back ride across the range to the desert.

The wedding of Miss Agness Kittlesen to Mr. Robert Morgan of Monrovia will take place this evening in the Congregational Church.

During the absence of Frank Spencer, agent for the Times and Examiner, Chester Bryant is distributing the morning papers. Inquiries and orders concerning these papers should be made to him. Chester is a busy man these days, with the papers to deliver and the early morning mail to transport to the post office, as well as a busy jitney business all day long.

Life Lines

BY H.M.C.

COOKING odors often tell us what our neighbor's going to eat. Fumes that come sometimes compel us to admit she's got a treat. Baked potatoes, corn au gratin, frying eggs and kidney stew. Kitchen smells that aren't forgotten ones that sure appeal to you!

When you're hungry as the dikes after working all day long Floating wafts of broiling chickens make the tummy feel all wrong Appetites are pesky critters, calling on a man to eat Buckwheat cakes or sweet corn fritters, Boston beans or plain raw meat.

Funny how you speed your walk ing when a kitchen window's passed Honest folks, there's no use talking thoughts of food make you walk fast Thank your nostrils for the pleasure that the smell of cooking gives. Thank your neighbor in a measure, if the smell's from where he lives.

Odors! Odors! From the kitchen, welcome to the evening air Keep a fellow fairly itchin' for his supper table share Cook away and folks won't mind it, gladly will the tunes be nosed BUT when you are using garlic—keep your kitchen windows closed!

DISSOLUTION OF CO-PARTNERSHIP

The copartnership heretofore existing between the undersigned partners, under the firm name and style of Valley Feed and Supply, and conducted in East San Gabriel, and in Arcadia, California, is this day dissolved by mutual consent, the undersigned Harold W. Bell having sold and transferred all his right, title and interest in said partnership, partnership property and good will of the business to the undersigned Lewis W. Barlow, who will conduct and carry on said business at both of said locations, and who is authorized to collect all accounts and assume all the obligations of said partnership and business.

PASADENA POST IS SWEEPED BY BLAZE

Sweeping through the business office and composing room as though a blast had impelled its flame, fire Friday night wrecked those two departments of the Pasadena Post and caused damage estimated at \$50,000. The mechanical department of the Post was put out of operation, but the working force was transferred to the Los Angeles Evening Express office and issued the Post from Los Angeles.

The origin of the disastrous blaze has not been ascertained, but Pasadena firemen stated the flames started in a stairway connecting the first floor business office with the composing room on the second floor of the brick and frame structure.

New Inter-Continental Record Sought by These Flyers

THESE two flyers are Dr E. Pintos Martens (left), Brazilian explorer and scientist, and Lieutenant Walter Hinton (right), who navigated the first American plane across the Atlantic. With a crew of three assistants, Martens and Hinton set out with the Philadelphia-made seaplane Sampalo Correa from New York for Rio de Janeiro. The distance is 8500 miles. Dr. Martens counts on flying craft to bring the Americas much closer together than ever they have been before.

NOVEL MUSEUM FOR CATALINA

Avalon To Have One With Reproduction of Indian Skull on Top

Two hundred feet above the Pacific Ocean and overlooking Avalon, on Catalina Island, Ralph Glidden—of the Staff of the Museum of the American Indian, George G. Heye Foundation, in New York—will erect a unique museum of his own that should prove one of the wonders of the modern world. Mr. Glidden is an archeological authority on the famous Channel Islands, in whose ancient history there is a steadily increasing interest.

Instead of a tower to crown it, the Glidden Museum will be capped by a gigantic skull, 16 feet wide, 11 feet high and 24 feet through. For his model, Mr. Glidden is taking the skull of an Indian chief which he unearthed recently on San Nicolas Island, just out beyond Catalina. The enlargement will follow its dimensions proportionately.

The museum will be an imposing structure of solid masonry, 30x40 feet. The skull featuring the exterior will serve as an index to the contents of the building. The eye-sockets will be five feet in diameter, equipped with powerful electric lamps, the lights of which will be visible far out at sea.

The nose-bridge will also be fitted up with additional illumination, as well as the lower jaw. The effect of the latter will be designed so as to show up the teeth, which were one of the notable features of the aborigines. The whole thing will be such that no one ever seeing it can forget Mr. Glidden's museum. If men ever grew large enough for heads of such a size as this skull, they would be from 60 to 70 feet tall. Although the original Channel Islanders were large men, not many exceeded one-tenth of that size.

The novelty of Mr. Glidden's museum will not stop with the outside. If anything, the interior is to be even more bizarre. He intends taking for his pattern a mortuary chapel recently unearthed on the Island of Malta, in the Mediterranean, halfway between Italy and Tripoli, where St. Paul was shipwrecked in 60 A. D. This burial hall has for its mural decorations more than 2000 skulls, with a frieze of collar-bones.

While Mr. Glidden will not attempt to duplicate this chapel, he intends to arrange many of the human bones that he has collected in various geometric designs. When completed the museum on Santa Catalina will be unlike anything else anywhere in this country. It will be open to the general public, and the builder plans to give talks on the relics so that the people who visit it will learn something besides having their curiosity catered to.

DIFFERENCE IN ALTITUDE

H. G. Frederick returned to Sierra Madre this week after spending the summer at Giant Forest, taking pictures and putting on weight. After several months in an altitude of more than 6,000 feet he says he noticed a marked difference in the lower levels. The heat and heavy atmosphere were especially oppressive at Bakersfield, after which he found Sierra Madre quite a relief, though still quite different from the High Sierras to which he has become accustomed.

27 North Baldwin Ave. Exchange 2Three brakes
on many cars ~
and one is always set

As much as 20% of the power at the rear or driving wheels of the automobile may be lost through the use of an incorrect oil. Too heavy an oil, or one lacking in certain qualities, acts as a brake on the car.

The ideal oil is the thinnest oil which will keep the bearing parts separated, and at the same time offer in itself the least frictional resistance to the engine power going to the driving wheels.

This oil, providing it has "oiliness," stability and purity, will give perfect lubrication and permit the development of the maximum power, speed and gasoline mileage of the car.

Zerolene fills all these requirements perfectly.

The Ideal Oil

All bearing clearances decrease under the heat of operation.

Analysis of Zerolene shows that the differences in its body at the various engine temperatures, from cold to operating temperature, follow in close relation the decrease in bearing clearances.

For this reason Zerolene oils have at all operating temperatures exactly the required body to splash and flow freely into the fast-moving, small-clearance bearings to provide an adequate film of lubricant.

Because of this and its "oiliness," stability and purity, Zerolene gives perfect lubrication under all conditions of engine operation, and permits the development of the maximum power, speed and gasoline mileage of the car.

RADIO

COUPLING CONTROLS
THE OSCILLATIONS

How the Vacuum Tube Radio Receiver Can Be Made
Regenerative.

If it were not for the bends in the characteristic curve, the three-electrode vacuum tube could not be made to produce oscillations of constant amplitude when self excited. It is easily seen that if the characteristic curve were a straight line, the operation of the tube would be so unstable as to render the tube useless as an oscillation generator. A third condition of relative values of potential variations can exist, that is, when the grid circuit potential variations are less than the potential variations existing in the tuned circuit between the points X and Y. When this condition exists, the oscillations in the tuned circuit cannot be maintained but the decrease in amplitude in the tuned circuit oscillations will reduce the grid excitation, and the tube will finally cease to oscillate.

Thus the coupling that exists between the plate circuit through the tuned circuit inductance L and the grid circuit through the inductance I, control the conditions that will or will not cause the tube to act as a generator of undamped oscillations.

Suppose that the coupling existing between the two coils L and I is such that the tube is generating oscillations. If the coupling is reduced, that is if the coils be moved farther apart it will require greater and greater variations in potential in the coil L to maintain the same variations in the coil I. This weakening of the plate to grid coupling causes stronger oscillations in the

either magnetic or electrostatic coupling.

In Figure XXXVI the tube was made self exciting by coupling an inductance C connected in the grid circuit to L, an inductance in the tune plate circuit. A development of this circuit is shown in Figure XXXIX.

Here the energy, instead of being directly coupled from the plate to the grid circuit, is first necessary to an intermediate circuit, M-N, and then to the grid circuit. It is necessary of course, that the circuit X-Y and M-N have the same natural period, that is to say, they must be tuned to the same frequency. If the frequency is relatively high, the condenser C can be dispensed with, and the capacity of the filament used as a portion of the oscillation plate circuit.

The circuit as shown in Fig. XXXIX is inherently the circuit used in low power undamped or continuous wave radiotelegraph transmitters. By substituting in the oscillating circuit M-N the capacity of an antenna with respect to the ground, we have the continuous transmitter shown in Fig. XL.

By placing a key in the "B" or plate battery to turn the plate battery off and on the start and stop, the tube oscillating dots and dashes can be sent out by varying the coupling between the grid and plate coils I and L and the antenna circuit, the transmitter is adjusted for maximum power output. To adjust the wave length the value of the antenna inductance is varied.

SUMMER SLUMP IS BENEFIT

Both Manufacturers and Dealers in Radio Apparatus Are Learning a Needed Lesson.

"The slump in the radio business during the summer months is a boon to the entire industry," declares Joseph D. R. Freed, in an interview published in Radio Merchandising. "Both the radio dealers and the more stable and serious manufacturers are learning a well-needed lesson from this slump," he says. "For example, dealers

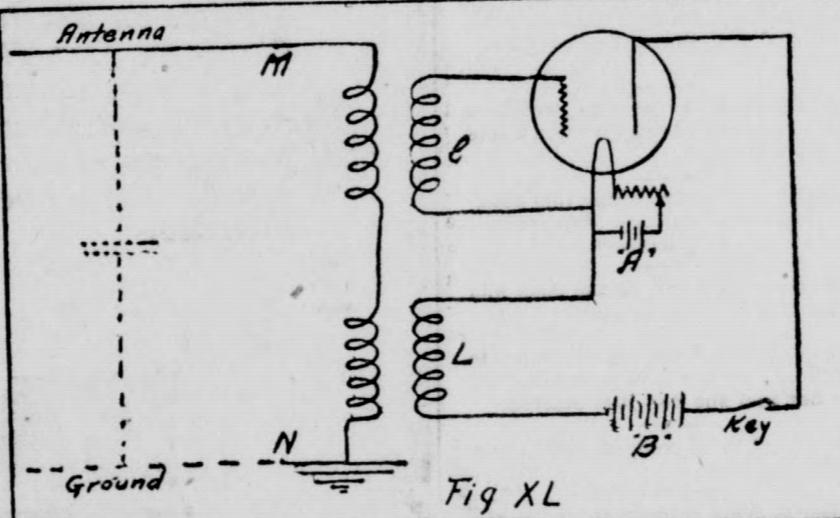

Fig XL

plate circuit. The limit is reached when the plate current reaches the saturation point. After this point is reached, further weakening of the coupling cannot increase the plate current variations so that the transfer of energy from the plate to grid circuit now decreases, and any further reduction in coupling will cause such a reduction in excitation that finally the tube will cease to function.

There is, then, a certain degree of coupling at which the tube will start to oscillate, a certain degree of coupling which will produce maximum oscillation in the plate circuit and another degree of coupling at which the tube will cease to oscillate.

From the foregoing short discussion it can be seen that a three electrode vacuum tube can be made to function as a self excited generator of an undamped alternating difference of potential at radio frequency, or by exciting the tube externally by, for example, an incoming radio signal, the amplified plate circuit variations in potential can be fed back into the grid and held to further increase the amplitude of the plate circuit variations. In

ers are beginning only now to realize the truth of the fact that they cannot afford to carry a large and heterogeneous lot of odds and ends in radio apparatus in the hopes that they will be able to dispose of it. They are learning now, by a stern process, that hysterical overstocking of apparatus in an effort to meet the spasmodic demand of radio 'faddists' is not going to prove profitable in the long run. They are beginning to realize that dependable apparatus, bought to meet the varying radio conditions, is more to be relied upon than unknown apparatus that looks good in the catalogue, and is merely an ornament upon the shelves.

"Manufacturers, too, are learning their lesson from this slump. They are realizing that the time of 'order taking' is past and that the time of 'order getting' is here. They are learning now, if they didn't know it before, that in order to sell radio apparatus, they must give good value, serviceable merchandise, attractive prices and real service and dealer co-operation."

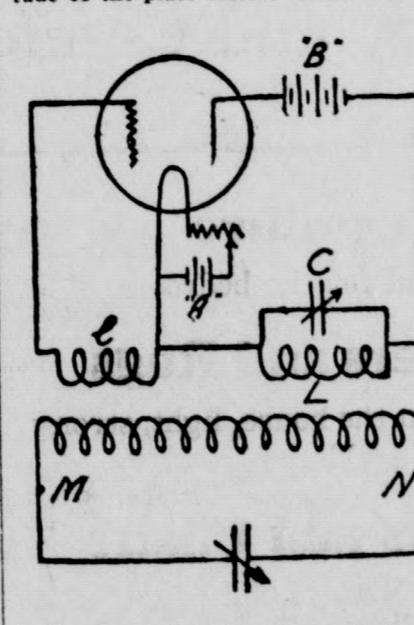

Fig XXXIX

the former conditions the tube is used in continuous wave telegraphy and in radiophone transmitters.

When operating under the latter conditions, the tube is used in "regenerative" circuits of radio receivers to produce enormous amplification. When used in radio receiving circuits, of such kind that energy is transferred from the plate circuit to the grid circuit, we have the famous "Armstrong regenerative" or "feed back" circuit which is so generally used at the present time.

Any vacuum tube radio receiver can be made regenerative by arranging the circuit in such a manner that the plate circuit energy is fed back into the grid circuit. This may be accomplished by

SPARKS

It is reported Doctor Marconi has obtained a speed of 200 words a minute in transoceanic radio messages.

Until telephone companies are fighting the use of radio for commercial purposes. The old story of trying to sweep back the waves.

A San Francisco paper prints a funny picture of a young woman suing for divorce on the ground of "radio." She told the judge her husband hadn't noticed her for three weeks.

It is said the youngest licensed radio operator lives in Los Angeles, in the person of Bobbie Garda, aged eight years. He is the son of an electrician and it is claimed helped to build the first radio station on the Pacific coast.

Three children were recently burned to death at Alken, S. C., in a fire resulting from a short circuit in a radio transformer. The national board of underwriters is sending out warnings of the necessity for protecting radio wires from lightning and light power currents.

Radio is co-operating with the farmers' granges in the East, giving the latest prices for fruits and vegetables, which are posted for ready reference. The farmers claim false quotations have been given them heretofore by unscrupulous dealers in the big cities, and they have in this way been defrauded of large sums.

Plays Close to "Pro" Golf

HERE'S Miss Glenna Collett of Providence, R. I., who played the 18 holes on the Sheneccosett Club golf course in '76. This was equal to the men's record and only missed par by 3. If she'd accomplished that she'd have beaten the best example set by either Herd or Taylor, the British "pros" who recently played over the same course. Miss Collett's record is 6 better than any other woman ever made at Sheneccosett.

News Wantads bring big returns.

SIERRA MADRE WOMAN'S CLUB

By Besse Palmer Rhodes

DINNER DANCE

Heralding the beginning of the club season, the opening meeting of which will be held on Monday, October 9, officers and directors of the Sierra Madre Woman's Club are planning another of their enjoyable dinner-dances which are intermittent social features of the club year. Already September evenings are growing chilly and by the 29th, the date set for the dinner-dance, this enjoyable form of social activity will be hailed with joy. The affair is to be made a truly gala one, and many are awaiting it with eager expectancy. Reservations will be received by Mrs. W. R. Lees, (Green 79) until Wednesday evening, October 27. Numbers of popular hostesses are forming congenial dinner parties, and of course the early reservations will be given the choicest table locations the clubhouse affords. Make your reservations today.

is composed of the young men and women of the town and is sponsored by the Woman's Club, invites the public to share with it the intellectual treat which is being planned for Friday evening, September 22, at the club house. At this time E. W. Camp, a distinguished lawyer of Los Angeles, and for many years a prominent citizen of Sierra Madre, will speak on "Alexander Hamilton," a subject which should be prolific of many high and ennobling ideas requisite to good citizenship. The meeting will open at 8 o'clock and the community is invited. There will be no charge.

DO NOT MISUNDERSTAND US

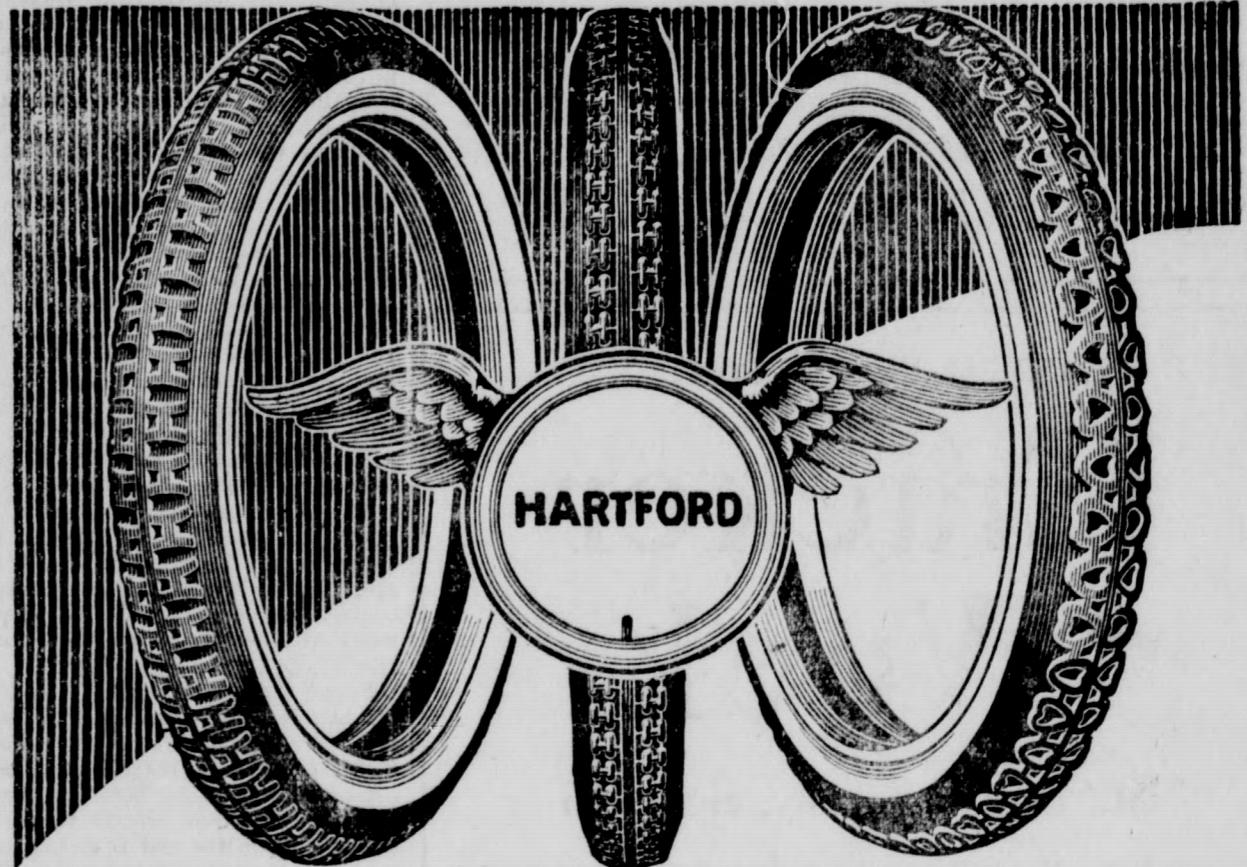

During the past few months The News has taken a decided stand on the question of outside solicitors for various fake propositions visiting the city and disposing of their wares, etc. Our attention has been called to the fact that we have been misunderstood in some instances. The News is not opposed to solicitation of funds by local organizations or societies, nor is the local chamber of commerce opposed to such solicitation.

But we are opposed to the outsider, who comes into the city with some

false advertising scheme and leaves with a good many dollars in his jeans that should go to the support of local institutions.

Another form of soliciting that does not meet with our approval is the fake magazine agent, who has not the approval of local schools, churches or societies in the city, or the stranger who is begging for funds to "help him through college."

When funds are solicited by local organizations the money is spent in the community for the betterment of local conditions or other worthy cause. —Hemet News.

WE'VE known motorists to go along for years thinking they were getting high value for their tire money until they discovered the tremendous economy of Hartford Tires.

It's safe to say that you too will get a new idea of what a good tire can do when you start with Hartford.

A brand that has been saving people's tire money for a quarter of a century.
